Activity report

Title: World Radiology day

Objective: Celebrate the birth anniversary of Wilhelm Conrad roentgen

Date: 8.11.2021**Time:** 10:00 am – 2:00PM

Location: The Oxford dental college .bangalore

Organized by: Department of Oral Medicine and Radiology

Participants: PGs, Interns, Final year, Third year

Method adapted: Group activity, Competition,

Description: The dept hosted a radiology week from 29th Oct to Nov 8th. A ideal radiograph competition was conducted for final years, in which the best three radiographs were awarded prizes. The third year students actively participated for group activity. Each group was allocated one stalwarts in radiology, they had to speak about them for 5 mins, and the best group was awarded a prize. The Post graduates students had to give an extempore presentation on different conventional extr-aoral radiographs. On Nov 8th there Grey scale rangoli competition for all students .In which they had a free hand rangoli of which they could only use Black, White, grey and silver sprinklers. In the afternoon we had a prize distribution ceremony for the winners. Dr. Bharthi welcomed the participants for the programme followed by prize distribution.

Number of students participated: 43

Title: World Cancer day

Objective: introducing patients on causes ,signs and symptoms of Oral cancer

Date: 4/2/2022

Location: The Oxford Dental College

Organized by: Department of Oral Medicine and Radiology

Participants: Patients visiting the dept

Speaker: Faculty and Postgraduates

Method adapted: Using Flip charts

Description:One area was identified adjacent to the department for screening of patient .The patient visiting the dept were introduced on the term Oral cancer .They were shown flip charts regarding the causes ,initial changes present in the oral cavity ,what are the alarming signs and symptoms they should be aware . Special focus was laid on patient with habit history and they were also updated on the premalignant disorders associated which may further progress to Oral cancer if not diagnosed at initial stages .

Title: International Oral & Maxillofacial Surgeon's Day

Objective: Metamorphosis of face- combating Mucormycosis and transforming lives

Date: 13/02/2022 Time: 10:00 am – 12:00 pm

Location: The Oxford dental college. Bangalore

Organized by: Department of Oral & Maxillofacial Surgery

Participants: Faculty & Post graduates

Speaker: Dr. Harish Kumar A

Description: The program began with Dr. Harish Kumar A., Head of Department addressing the gathering and raising awareness among patients about mucormycosis, its spread and how to curb the infection. Patients were educated about the Department of Oral & Maxillofacial Surgery itself and the various procedures that are carried out in the department ranging from extractions to implant placement. A walkathon was also conducted a day before in order to raise awareness about mucormycosis. Finally, vote of thanks was proposed by Dr. Harish Babu. Followed by which the Dean & Director Dr. A.R Pradeep, DrPriyaSubramaniam (Director of post graduate studies) and the HOD were felicitated.

Activity Report

Title:patient education programme

Objective: To create awareness and educate patients and students of The oxford dental college

Date: 05.03.2022

Time: 10.00am to 11.00am

Location: department clinical section

Organized by: Department of conservative dentistry and endodontics

Audience:Students, Staff, Patients and General public

Speaker:DrSrirekha

Method adopted: Lecture/models/posters

Materials used:Pamphlets, flyers, banners, models

Description: Dr Srirekha gave awareness and education to patient and students on the development of prevention of dental caries, and management of dental caries. Dental caries is microbial disease that affects 60-90% of the population. Oral diseases are one of the most prevalent conditions in the world and are largely preventable.

Title: Cancer Awareness- Deadly disease in your mouth

Objective: To create awareness to people about tobacco usage and its effect on oral cavity.

Date: May 14th and 15th 2022

Location:Chikkaballapura

Audience:Rural population

Team: Faculty member, Dr Archana, Dr Shilpashree K B, Dr Divya BM, Dr Antara of Public Health Dentistry, The Oxford Dental College, Bangalore.

Method adopted: Charts and Models

Activity report of Oral Health screening in Rural population

4 Staff and 26 students from Oxford Dental College started at 6:00 am in the morning and reached Chikkaballapur by 8:30 am. Designated places were allotted for the camp to take place and the students arranged for the camp and the students screened for all oral diseases and in particular for Oral Cancer. The students divided the patients into high risk and low risk group for oral lesions. The students used charts and models to explain the patients regarding the harmful effects of the habits related to tobacco. The basic treatments were provided to patients in the mobile unit along with the awareness program. The camp winded by 7 :00pm in the evening. A total of 330 patients were screened and 109 were treated.

ACTIVITY REPORT

Title: Training ASHA workers – Know Your Own Mouth- Self examination is important in pregnancy

Objective: To Train ASHA workers to train the pregnant in self examination of the mouth in keeping a healthy mouth.

Date: October 7th 2021

Location: PHC Banashankari

Audience: Final Year UG students

Team: Faculty member, Dr.Hithaishi, Department of Public Health Dentistry, The Oxford Dental College, Bangalore.

Method adopted: Power Point Presentation and Charts

TRAINING SESSION TO ASHA WORKERS

Oral diseases are a serious public health problem, which affect the overall health of a person. Oral health during pregnancy plays a crucial role in the overall health and well being of pregnant women. Women are knowledgeable about and attentive to their own oral care and are more likely to teach the children how to properly brush, floss and take care of their teeth. The community health workers like ASHA, are in a potentially excellent position to assist in basic oral health services such as dental health education and intra oral screening. Oral health

Report on the celebrations of Oral Hygiene Week at The Oxford Dental College, Bangalore.

Oral hygiene day is celebrated on 1st August in memory of the birth anniversary Dr G B Shankwalkar the doyen of Indian Periodontics. Celebration of Oral hygiene week 2021 was conducted with zeal and enthusiasm at **The Oxford Dental College, Bangalore from Saturday the 7th August 2021 to Saturday the 14th of August 2021.** The proceedings ensued with the blessings of the **Chairman, Oxford Institutions, Shri SNVL NarasimhaRaju** and under the able guidance of **Dr AR Pradeep, Dean And Director, Professor and Head, Department of Periodontology, The Oxford Dental College.** The events that were part of this celebration included painting and sketching, Just a Minute (JAM), essay writing competition, fancy dress competition, skit for patient education and a flash mob. As part of the Oral Hygiene Week celebrations, free toothpaste samples were distributed to patients (courtesy Colgate Palmolive India Ltd) during the entire month of August.

In view of the prevailing pandemic, the planned free oral hygiene checkup and treatment camp (for general public outside the college) was cancelled. All patients visiting The Oxford Dental College were screened with a prior RT-PCR test before admission into the clinics.

DEPARTMENT OF PERIODONTOLOGY

THE OXFORD DENTAL COLLEGE

REPORT ON THE PROGRAMME ORGANIZED ON 'TOBACCO CESSATION'.

AGENDA OF THE PROGRAMME:

Tobacco one of the very well know carcinogen is taking many lives in the world and more importantly in India . Tobacco in India are taken in different forms in different parts of the country. Broadly they are classified into smokeless and smoking form. Under smokeless form we have mawa , khaini, mishri , gul and in smoking tobacco we have cigarettes , bidi , cigar , chuttas, dhumti and pipe .

TEAM:

Our team consisted of a faculty member and sixteen dentists perusing post-graduation in the Department of Periodontology, The Oxford Dental College, Bangalore.

DATE AND TIME OF THE VISIT:

On 9th July 2021 at 11.00 AM.

LOCATION:

Hongasandra road, Bommanahalli.

TARGET POPULATION:

The general public near the Hongasandra road

BRIEF SUMMARY:

The most common condition that will be seen due to this habits is oral squamous cell carcinoma , so it's the duty of dentist and the dental students to educate the people regarding the ill effects of using tobacco , so we had tobacco cessation program in our college , where the UG students made

Website: www.theoxford.edu

posters and banners showing the ill effects of tobacco usage , different types of tobacco and the PG students communicated with the people who had the habits , and educated them to quit the habit.

Health education and Information posters about the World No Tobacco Day 2017 theme of “Tobacco- a threat to development” . Consequences of tobacco consumption and methods of tobacco cessation were displayed. These posters were exhibited for duration of one week starting from 30th may to 6th June, in the outpatient lobby, Ground floor of the Institution, with the intention of informing and educating the outpatients.

Conclusion

Its not just smoking that kills, any tobacco habits on a long run will kill a person , so its important to educate people and make them understand the risks of tobacco habits and camps are the ideal way to do it. So we the students of The Oxford Dental College have already taken our first step by conducting this program.

DEPARTMENT OF PERIODONTOLOGY

THE OXFORD DENTAL COLLEGE

REPORT ON THE PROGRAMME ORGANIZED ON 'WASTE MANAGMENT'.

AGENDA OF THE PROGRAMME:

Bio-medical waste may be defined as any solid, fluid or liquid waste, including its container and any intermediate product, which is generated during the diagnosis, treatment or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals and the animal waste from slaughter houses or any other like establishments.

It is of utmost importance that the medical waste is managed in an environmentally sound manner. Environmentally-sound management of the medical waste requires proper understanding of risks associated with the disposal of such wastes, and methods for proper segregation, storage, handling, treatment and disposal.

In this regards the department of Periodontology had organized waste management program to educate and motivate the students and also made them understand the importance of managing the hospital wasteregarding the importance of this day.

TEAM:

Our team consisted of a faculty member and sixteen dentists perusing post-graduation in the Department of Periodontology, The Oxford Dental College, Bangalore.

DATE AND TIME OF THE VISIT:

On 9th October (Saturday), 2021 at 11.00 AM.

CHILDREN'S EDUCATION SOCIETY (Regd.)

Ph: 080-61754680 Fax : 080 – 61754693E-mail:deandirectortodc@gmail.com

Website: www.theoxford.edu

LOCATION:

The Oxford Dental College, Bommanahalli.

TARGET POPULATION:

The undergraduates and post graduates students currently studying in The Oxford Dental College

BRIEF SUMMARY:

The Department of Periodontology organized the program today in our college by enlightening the students of the various protocols of managing the hospital waste that is produced from daily clinical practices. Thanks to our HOD for his constant support and guidance the campaign was successfully completed.

The Department Of Periodontology had organized following the programs:-

The bio-medical wastes are not handled with the clinical care as needed to avoid the problems otherwise caused. More often than not, mixed bio-medical wastes of different kinds are discarded together for disposal along with the municipal wastes. A good amount of reusable materials, such as needles, syringes, plastics and bottles, is picked up by rag-pickers, and are recycled back into the market without any treatment for disinfection the consequences of which could be anybody's guess.

Bio-medical waste may be defined as any solid, fluid or liquid waste, including its container and any intermediate product, which is generated during the diagnosis, treatment or immunisation of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals and the animal waste from slaughter houses or any other like establishments.

It is of utmost importance that the medical waste is managed in an environmentally sound manner. Environmentally-sound management of the medical waste requires proper understanding of risks associated with the disposal of such wastes, and methods for proper segregation, storage, handling, treatment and disposal.

Bio-medical wastes from the hospitals, nursing homes and clinics include a variety of wastes, such as hypodermic needles, scalpel blades, surgical gloves, cotton, bandages,

CHILDREN'S EDUCATION SOCIETY (Regd.)

THE OXFORD DENTAL COLLEGE

(Recognized by the Govt. of Karnataka, Affiliated to Rajiv Gandhi University of Health Sciences, Karnataka & Recognised by Dental Council of India, New Delhi)

Bommanahalli, Hosur Road, Bangalore – 560 068.

Ph: 080-61754680 Fax : 080 – 61754693E-mail:deandirectortodc@gmail.com

Website: www.theoxford.edu

clothes, medicines, blood and body fluid, human tissues and organs, body parts, radio-active substances and chemicals.

Some of these contain harmful organisms and disease causing agents. For instance, reuse of discarded syringes/needles without disinfection can transmit lethal diseases, like AIDS and hepatitis.

Similarly, indiscriminate recycling of used cotton, clothes and medicines can pose a host of health hazards. Also, improper incineration of wastes, particularly chlorinated organic compounds, can result in noxious emissions, including dreaded dioxin.

Waste Characterization:

The medical wastes, which are amenable to specific treatment/disposal methods, are grouped into the following categories:

- (i) General Waste – All non-hazardous hospital wastes, similar in nature to domestic wastes.
- (ii) Sharps – These include hypodermic needles, syringes, scalpel blades, blood specimen tubes, Pasteur pipettes and broken glass that have been exposed to infectious agents. (iii) Culture and stocks of infectious agents and associated biological – Specimen cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biological; and discarded live and attenuated vaccines; culture dishes and devices used to transfer, inoculate, and mix cultures.
- (iv) Bulk human blood and blood products – Human blood, products of blood, items saturated and with the potential for dripping blood, serum, plasma, and other blood components, including the soiled waste.
- (v) Pathological wastes – Human tissues, organs, body parts and body fluids that are removed during surgery and postmortem procedures, with the exception of teeth, faeces, excreta and corpses and body parts intended for interment or cremation.
- (vi) Isolation wastes – Wastes contaminated with blood, excretions, exudates, or secretions from sources isolated to protect others from highly communicable infectious diseases.

CHILDREN'S EDUCATION SOCIETY (Regd.)

Bommanahalli, Hosur Road, Bangalore – 560 068.

Ph: 080-61754680 Fax : 080 – 61754693E-mail:deandirectortodc@gmail.com

Website: www.theoxford.edu

(vii) Animal waste – Contaminated animal carcasses, body parts, fluids and bedding of animals that have been exposed to infectious agents during research (including research in veterinary hospitals), production of biological, or testing of pharmaceuticals.

(viii) Radio-active waste – From administering radio-pharmaceuticals and performing nuclear medicine procedures and radio-immunology procedures.

(ix) Antineoplastic (cytotoxic) drugs – Trace contaminated materials and contaminated human excreta (cytotoxic chemicals are hazardous pharmaceuticals used in chemotherapy, which in addition to being toxic are mutagenic and/or teratogenic when discarded or spilled).

(x) Chemical waste – Showing ignitability, corrosivity, reactivity or the ability to produce toxic leachate in a landfill.

Waste Quantification:

According to a WHO report, around 85% of the hospital wastes are actually non-hazardous, 10% are infectious, and 5% are non-infectious but hazardous.

1. Segregation:

Segregation of wastes is the most important prerequisite in the process of wastes management. Segregation of waste allows special attention to be given to the relatively small quantities of wastes and thereby reducing the risks as well as cost of handling and disposal.

For the purpose of segregation, the bio-medical wastes can be broadly classified into the following categories:

(i) General or non-hazardous/non-infectious medical waste, which is not contaminated with blood, body fluid or other infectious agents or materials, or which does not contain toxic/hazardous chemicals, e.g. paper, fabrics, glass, food residues, containers etc. Such waste needs no special management technique, but can be managed as required in case of any domestic waste.

(ii) Infectious/hazardous medical waste, which needs special/careful management.

Proper segregation of infectious/hazardous wastes from the general waste is important for efficient and economic treatment and disposal.

Infectious/hazardous waste is characterised by-

- (i) The potential of the waste to transmit infection, and
- (ii) Properties of toxicity and/or low level radioactivity.

The World Health Organisation (WHO) has recommended following classification for segregation of bio-medical wastes:

- (a) General non-hazardous wastes.
- (b) Sharps (whether infected or not).
- (c) Infected waste not containing sharps.
- (d) Chemicals and pharmaceuticals other than cytotoxic drugs.
- (e) Other hazardous wastes (includes radioactive wastes, cytotoxic drugs, and high pressure containers).

2. Storage:

Segregated wastes of different categories need to be collected in identifiable containers.

Sharps need special attention while segregating and storing-because needles can act as reservoirs of pathogens in which they can survive for a long time due to the presence of blood. Sharps can also provide a direct route for pathogens into the bloodstream through any cut in the skin.

Syringes and needles should be damaged before putting them into the containers so that rag-pickers are dissuaded from collecting them for resale. This saves the needles from getting recycled at a later stage. Sharps must always be kept in puncture-proof containers to avoid injuries and infection to the workers handling them.

Plastic bags for storing the waste may be suspended inside a frame or be placed inside a sturdy container. A lid should be provided to cover the opening of the bag at the top.

Every room, such as ward, laboratory, operation theatre etc., should have containers/bags for the types of wastes that are generated in that room.

In all rooms, except isolation wards, there should be a container for general waste. All wastes from isolation wards should be regarded as infectious and treated as such.

CHILDREN'S EDUCATION SOCIETY (Regd.)

THE OXFORD DENTAL COLLEGE

(Recognized by the Govt. of Karnataka, Affiliated to Rajiv Gandhi University of Health Sciences, Karnataka & Recognised by Dental Council of India, New Delhi)

Bommanahalli, Hosur Road, Bangalore – 560 068.

Ph: 080-61754680 Fax : 080 – 61754693E-mail:deandirectortodc@gmail.com

Website: www.theoxford.edu

Each container may be clearly labelled to show the ward or room where it is kept. The reason for this labelling is that it may be necessary to trace the waste back to its source. For example – if a porter is injured by a syringe or blade that has been put into a bag rather than into the correct sharps container, it is possible to determine the origin of that waste and identify the member of staff who was responsible for that ward. It may also help in knowing the type of infection that may have been transmitted.

It is of utmost importance that the medical waste is managed in an environmentally sound manner. Environmentally-sound management of the medical waste requires proper understanding of risks associated with the disposal of such wastes, and methods for proper segregation, storage, handling, treatment, and disposal.

Building young champions of **TOBACCO FREE GENERATION**

Protecting Indian Children from a highly addictive and killer substance

*"The world's most widespread, serious infection is purposely spread by its vector:
the tobacco industry" Von Eric LeGresley*

- They sell death as life
- Addiction as freedom and style
- Deny scientific evidences against tobacco
- Subvert all tobacco control measures

Freedom and sytle

are the trap they set to lure young people

THEY ENGAGE POPULAR CELEBRITIES TO PROMOTE THEIR PRODUCTS

It's Time to Turn the Tide Against the Tobacco Industry

Become a Tobacco Control Champion Today !
