Course Details

Esthetic Crowns in Pediatric Dentistry

A primary objective of placing crown is to achieve an Esthetic improvement. A remarkable change is also seen in the patient's self-image after correction of the texture, shade and shape along with good physiological form and function which helps in preventing further deterioration of the mouth by prevention of tooth migration, bone loss and arch collapse.

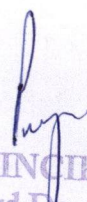

Aesthetic treatment of severely decayed primary teeth – A challenge for pediatric dentist!!

- Treatment shifted from extraction to restoration, with placement of stainless-steel bands or crowns.
- Functional, but anaesthetic and use was limited to posterior teeth.
- Higher Esthetic standard is expected by parents. Full coverage restorations provide an aesthetic appearance ◊ restoring function and durability.

Classification,

- a) Crowns that related to the tooth
 - 1) Resin veneered stainless steel crown
 - 2) Facial cut out crown
 - 3) Polycarbonate crown
 - 4) Pedo pearls
- b) Crowns that are bonded to the tooth
 - 1) Strip crowns
 - 2) Pedo jacket crowns
 - 3) New millennium crowns
 - 4) ART glass crowns

Primary anterior strip crowns were developed as an answer to the Esthetic and functional problem of stainless-steel crowns. Estetically, they provide a striking similarity to the original primary tooth. Functionally, they allowed for normal incisal wear of the primary teeth to take place. Use, however, was restricted to primary teeth having sufficient enamel for bonding retention after caries removal. Resin-bonded composite strip crowns are the first-choice restoration for many clinicians, mainly

Website: www.theoxford.edu

because of the superior aesthetics and the ease of repair if the crown subsequently chips or fracture. However, it is the most technique-sensitive option. Moisture contamination with blood or saliva may interfere with the bond, and haemorrhage can alter the shade or colour of the material. Additionally, adequate tooth structure must remain after caries removal to ensure that there is sufficient surface area for bonding. The strip crowns are transparent crown forms which simplify composite work for Pedodontics anterior restoration. These are trimmed and filled with either chemical or light curing composite material. They contour the material and support it while it sets and then strip off easily leaving smooth surface.

Prefabricated zirconia crown is an exceptionally strong ceramic crown and offers more Esthetic and biocompatible full coverage for primary incisors and molars. They are anatomically contoured, metal free, completely bio-inert, and resistant to decay Zirconia has a unique ability to resist crack propagation by being able to transform from one crystalline phase to another, and the resultant volume increase stops the crack and prevents it from propagating. EZ-Pedo (EZ-Pedo, Loomis, Calif., USA) was the first pediatric zirconia crown commercially available in the United States, originally marketed in 2008.

Figaro crowns have been recently added to the list of Esthetic full coronal crowns that can be used in pediatric patients. These crowns utilize either fiberglass or quartz filaments/fibres embedded with an outer cosmetic composite resin material.

Title: Preparation of Effective Power-Point Presentations

Date: 27-08-2016

Location: Auditorium, The Oxford Dental College

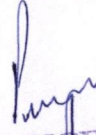

Organised by: TODC, Bangalore

Beneficiaries/Audience: All Teaching Staff

Speaker: Mr. Shashidhar

Method adopted: Lecture, Offline

Description: A one-day program was organised on "Preparation of effective power-point presentations" at the Oxford Dental College on 27th August 2016. The speaker Mr. Shashidhar, faculty of Oxford Engineering College, shared tips on how to make a power-point presentation effective. How to build the visuals of the lecture- to include the background, evidence, and conclusions of the specific messages. Many questions were asked by the attendees about how to create and deliver effective presentations. All the questions were answered well by the speaker.

Activity Report – CDE Programme

Title: Regenerative Dentistry and Oral Pathology

Objectives:

- To create awareness among the Participants about Regenerative Dentistry, stem cells and their application in Dentistry
- Dental Pulp derived Stem cells and their clinical application in Oral Pathologies.

Date: 21st November 2016

Time: 9:00 am- 5:30 pm

Location: The Oxford Dental College, Bangalore

Organized by: Department of Oral Pathology and Microbiology

Audience: PGs, Interns and Faculty

Speaker: Prof. Dr. S Sankaranarayanan

Method adopted: Lecture, hands on experience and live demonstration

Materials used: Power point presentation, pamphlets, flyers, banner, back drop and videos

Description:

The Department of Oral Pathology, Oxford Dental College conducted a CDE Programme on "Regenerative Dentistry and Oral Pathology" on 21st November 2016. A total of 60 PG students and Faculty from Oxford Dental College participated in the CDE Programme.

Stem cell research has potential to treat many different diseases but most stem cell research is still at the laboratory/experimental stage or in form of early clinical trials. Only haematopoietic stem cell therapy is a proven treatment. Dr. Shankaranarayanan highlighted on Stem cells derived from pulp and their application in treatment of several Oral lesions like OSF, Osteoradionecrosis of Mandible, and on Regeneration of Mandible post treatment of Ameloblastoma and other Odontogenic lesions. He also spoke on stem cell therapy in Periodontal Regeneration and conducted a workshop on same.

Course Details

Date:19/12/2017

Evidence Based Pediatric Dentistry

Evidence-based dentistry (EBD) is, at its core, extracting the evidence from dental research, critically appraising it and synthesizing it into clinical guidelines. The rest is up to you. You treat your patient using the best evidence coupled with clinical judgment and experience. Currently, Academy staff, your peers and outside experts steeped in evidence-based practice are working on the first-ever AAPD EBD clinical guidelines. These guidelines reflect a new age in pediatric dentistry research. While these guidelines will be produced utilizing a different protocol from the past, they will continue to recognize the value of input from pediatric dentists with years of clinical experience.

To reduce the variation in patient care & outcomes which is associated with: 1. The quality of science underlying clinical care. 2. The quality of clinical decision making. 3. Variation in the level of clinical skill. 4. The large & increasing volume of literature.

Principles

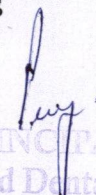

- Finding the best information quickly when it is required.
- Assessing its quality & deciding whether it is relevant which will help you to use research evidence in making every day clinical decisions. Goals
- Best evidence research
- Transfer of this evidence to use in practice.

Advantages

- Improves the effective use of research evidence in clinical practice
- Uses resources more effectively
- Relies on evidence rather than authority for clinical decision making
- Monitor & develop clinical performance.

Four Basic Phases of Evidence Based Dentistry

- Asking evidence-based questions
- Searching for the best evidence
- Reviewing & critically appraising the evidence
- Applying this information in a way to best help clinical practice
- Evaluation of performance of the technique, procedure, or material.

- Organising Secretary of ENDO-CON 2013 at PMNM Dental College and Hospital Bagalkot.
- Organising Secretary of COSMO-VISTA 2017 at PMNM Dental College and Hospital Bagalkot.
- Guest lectures at various colleges and IDA platforms on Medical Law and Ethics, Conservative Dentistry and Endodontic topics.

Brief about the lecture

TOPIC:

PROFESSIONAL NEGLIGENCE AND LEGAL ASPECTS IN MEDICAL PRACTICE

The medical profession in today's world is witnessing a decline in its standard which can be attributed to increasing number of litigations against doctors for being negligent towards the duty of care. Hospital managements are facing complaints regarding appropriateness of their therapeutic and diagnostic methods, the facilities made available to the patients and standard of professional competence.

The lecture will highlight the different aspects of negligence, the consequences and methods to overcome the litigations. It will also give a brief insight on KPME Act and its implications.

REPORT OF THE PROGRAMME

THE OXFORD DENTAL COLLEGE AND HOSPITAL

DEPARTMENT OF CONSERVATIVE DENTISTRY AND ENDODONTICS

The Department conducted a CDE course for post-graduate students by **Dr. Prahlad** on "MEDICO-LEGAL ASPECTS IN DENTISTRY"

The CDE course was scheduled on 13.01.2018.

Post graduates from department of Conservative dentistry and Endodontics attended the CDE course. The programme started at 10:00 AM in the Department seminar hall with an introduction by the Head of the Department Dr. Sirekha.

Lecture explained the importance of medico legal aspects in dentistry with discussion of clinical cases.

The post graduate students were successfully able to understand about negligence in dentistry and its impacts with the knowledge acquired from the course.

The Post graduate students were given the certificate of participation for an effective participation and understanding of the topic.

Activity Report – CDE Programme

“Novel Developments in Salivary Gland Pathology”

Title: Novel Developments in Salivary gland Pathology

Objectives:

- To explain the participants about various auxiliary techniques in Diagnosis of Salivary gland tumors
- To discuss the changes in latest WHO Classification of Salivary gland tumors and their Histomorphology

Date: 16th February 2018

Time: 9:00 am- 5:00 pm

Location: The Oxford Dental College, Bangalore

Organized by: Department of Oral Pathology and Microbiology

Audience: PGs and Faculty

Speaker: Dr. Sushmini Hegde and Dr. Saleha Jamadar

Method adopted: Lecture and Slide demonstration

Materials used: Power point presentation, pamphlets, flyers, and Micro-Slides

Description: The Department of Oral Pathology, Oxford Dental College conducted a CDE Programme on “Novel Developments in Salivary gland Pathology” on 16th February 2018. A total of 50 PG students and Faculty from Oxford Dental College participated in the CDE Programme

Diagnosis of Salivary gland tumors can be challenging because of the many diagnostic entities and overlapping morphological features, and the rarity of these tumors. For a salivary gland tumour, a needle biopsy is the preferred test for making a diagnosis. A surgical biopsy is avoided in almost every case, except in rare exceptions. Clinical examination and Imaging tests may be used for a provisional diagnosis, however definitive diagnosis is challenging. Several Auxiliary techniques have been developed to overcome these challenges like different IHC markers and fluorescence in situ hybridization probes. These ancillary testing approaches are useful in small biopsy samples.

Website: www.theoxford.edu

Molecular techniques have also added to our understanding of salivary gland tumour pathology and help us to recognize potential targets for treatment of these tumors. Appropriate molecular testing into the pathological evaluation of salivary gland tumors will help develop new targeted therapy treatments.

During the course, lectures were conducted on the recent WHO Classification, Imaging techniques and other molecular techniques in Salivary gland tumors. This was followed by the Valedictory function. The Organizing committee by Department of Oral Pathology and students who participated were appreciated for all the efforts put to make the event a great success.

THE OXFORD DENTAL COLLEGE AND HOSPITAL

DEPARTMENT OF CONSERVATIVE DENTISTRY AND ENDODONTICS

REPORT - “Magnification”.

The Department conducted a certificate course for post-graduate students & interns by **Dr. Vinod Kumar**, on “**Magnification**”. The program was held on **28/10/2018** with lecture followed by demonstration & hands on.

Magnification devices in endodontics is mainly meant for visual enhancement and improved ergonomics. This is crucial especially when long hours are spent in a narrow operating space to treat obscure microanatomy.

In endodontics magnification has its role in diagnosis, non-surgical and surgical endodontics. Clinician documentation can be well maintained.

The combination of improved lighting and magnification has been improved presently by orascope, Dental Operating Microscope, Surgical telescopes or loupes. However its acceptance and application is taking time.

By the end of the programe participants has gained knowledge on magnification devices such as loupes and Microscope and its importance in the field of dentistry and endodontics. It would be a great step including magnification devices in day to

Report

Title: Pulse Polio Program and Bone Marrow Donation

Date: 13th November 2018

Venue: The Oxford Dental College, Hospital and Research Centre, Bommanahalli

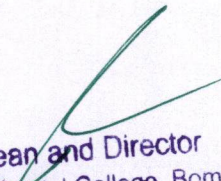

Conducted By: Department of Public Health Dentistry

Audience: All staff, Post Graduate students and Interns, The Oxford Dental College.

Speaker: Dr. Sreenivas Gowda

A program was organized by Department of Public Health Dentistry. The Oxford Dental College, Bommanahalli on Pulse Polio and Bone Marrow Donation on 13th November 2018. The guest speaker was Dr. Sreenivas Gowda. The speaker enlightened about importance of bone marrow donation and the wide array of survival based on bone marrow donation, a special focus was on the concerns and myths surrounding the topic.

He also encouraged the listeners to come forward and volunteer for Bone Marrow Donation. Volunteers were asked to register themselves in bone marrow donation registry and blood sample were collected.

Course Details

Date:10/09/2018

Inhalation Sedation in Managing the Child Patient

Conscious sedation is defined as A minimally depressed level of consciousness that retains the patient's ability to independently and continuously maintain an airway and respond appropriately to physical stimulation or verbal command and that is produced by a pharmacological or non-pharmacological method or a combination thereof.

Objectives of sedation in pediatric dentistry

✓ For the child

- Reduce fear and perception of pain during the treatment
- Facilitate coping with the treatment
- Prevent development of dental fear and anxiety
- Minimize physical discomfort and pain
- Control behaviour and/or movement so as to allow the safe completion of the procedure
- Minimize psychological trauma, and maximize the potential for amnesia
- For the dentist
- Facilitate accomplishment of dental procedures
- Reduce stress and unpleasant emotions
- Prevent "burn-out" syndrome

Documentation shall include, but not be limited to, the guidelines that follow:

- Informed consent: The patient record shall document that appropriate informed consent was obtained according to local, state, and institutional requirements.
- Instructions and information provided to the responsible person.
- The practitioner shall provide verbal and/or written instructions to the responsible person. Information shall include objectives of the sedation and anticipated changes in behaviour during and after sedation.

Ph: 080-61754680 Fax : 080 - 61754693E-mail:deandirectortodc@gmail.com

Website: www.theoxford.edu

- Special instructions shall be given to the adult responsible for infants and toddlers who will be transported home in a car safety seat regarding the need to carefully observe the child's head position so as to avoid airway obstruction.
- A 24-hour telephone number for the practitioner or his or her associates shall be provided to all patients and their families.

Inhalation Sedation is the recommended route for conscious sedation for pediatric dentistry. The inhalational route is the most reliable in terms of onset and recovery. Efficacy is reduced when children object to the nasal hood or have difficulty breathing through the nose. The use of a rubber dam improves the effect of the sedation and reduces atmospheric pollution.

Advantages include: It is a viable and cost-effective alternative to general Anaesthesia; Nitrous oxide sedation has minimal effect on cardiovascular and respiratory function and the laryngeal reflex. Using nitrous oxide inhalation sedation in conjunction with other sedatives may rapidly produce a state of deep sedation or general anaesthesia.

Disadvantages include: Acute adverse effects associated with this type of sedation are nausea, Chronic effects may be impotence, liver toxicity and recreational abuse, Exposure to nitrous oxide can result in depression of vitamin B12 activity resulting in impaired synthesis of RNA.

Activity Report

Titles: Clinico-Pathologic Correlation of Odontogenic lesions

Objectives:

- To know the clinical appearance and histopathology of various commonly occurring odontogenic lesions
- To equate the morphological features of the lesions with to the probable histopathologic features.

Date: 14/03/19

Time: 10:30 am- 3:00 pm

Location: Auditorium, The Oxford Dental College, Bangalore

Organized by: The Department of Oral Pathology, The Oxford Dental College

Audience: Teaching Staff

Speaker: Dr Bharati P

Method adopted: Lecture

Materials used: Power point presentation, pamphlets, flyers, banner, back drop and videos

Description: The CDE Programme was held on 14/03/19 and the topic for the programme was "Clinico-Pathologic Correlation of Odontogenic lesions". The objective of conducting the programme was to gain insights to know and correlate the clinical appearance and histopathology of various commonly occurring odontogenic lesions. The Speaker was Dr Bharati P, Professor from Department of Oral Medicine, The Oxford Dental College, Bangalore.

The programme was inaugurated by the Dean and attended by the teaching faculty who learnt the clinical and histomorphological similarities of these lesions. The clinical appearance, radiographic features and their importance in histopathological diagnosis was emphasized. The speaker used power point presentation for the programme. The talk was well received by the staff members who asked queries at the end of the session regarding the application.

Website: www.theoxford.edu

Few case reports from the presenters achieves was presented to the audience. The cases were discussed by correlating the clinical features and radiological features with the histopathological features. There was a positive response from the audience during interactive session of the program. The queries from the staff were effectively answered by the speaker. The programme was followed by lunch and valedictory programme.

Speaker: Mr. Shashidhar.

Method adopted: Lecture, Offline

Description: A one-day program was organised on "Online Data storage" at the Oxford Dental College on 16th October 2018. The speaker, Mr. Shashidhar, faculty of Oxford Engineering College, spoke about data that can be stored in online platforms like cloud, Google drive or stored on servers, unlike a USB drive, external hard drive, or flash drive, users do not need to carry around a physical device to store their data. He elaborately explained how online file storage works.

Many questions were asked by the attendees about the role of internet in data storage. All the questions were answered well by the speaker.

Description:

A one-day program was organized on "Insight to 't scan' in diagnosing TMJ disorders" at The Oxford Dental College on 26th September 2019. The speaker, Dr. Ravi Ranjan Sinha, spoke about numerous cases on TMJ disorders and the role of T scan in the diagnosis of TMJ disorders. He also showed the technique of recording the occlusal bite using the t scan on patients. Many questions were asked by the attendees about various treatment modalities. All the questions were answered well by the speaker.

Report

"Recent Advances in Post Endodontic Restoration".

The Department conducted a certificate course for post-graduate students & interns by **Dr. Sirekha A**, on "**Recent Advances in Post Endodontic Restoration**". The program was held on **14/09/2019** with lecture followed by demonstration & hands on.

The restoration of endodontically treated teeth must be planned before initiating root canal treatment. Provisional (temporary) restorations during root canal treatment protect the root canal system from bacterial ingress and include Zinc Oxide eugenol or calcium sulphate preparations used for short periods and glass-ionomer or resin-modified glass-ionomers for longer interim periods. Ideally, a definitive core restoration should be placed at the time of obturation, before removal of dental dam. The prognosis of mature teeth improves by conservation of tooth structure, avoiding posts whenever possible, avoiding gaps between gutta-percha and core restoration interface as well as full coverage restorations on anterior teeth and by the provision of cuspal coverage restorations on posterior teeth. Recent evidence suggests that conservative approaches, using direct-bonded resin-composite restorations, have promise for restoring largely intact posterior teeth.

Fibre posts are associated with a higher incidence of restoration failure than metallic posts, but with a lower incidence of tooth fracture. When posts are indicated, preparations should be conservative, removing minimal radicular structures.

Description:

The Department of Oral Pathology, Oxford Dental College conducted a CDE Programme on “Classification and Diagnosis of Lymphoid Disorders – An Overview” on 13.09.2019. A total of 35 UG students from Oxford Dental College participated in the CDE Programme.

During the course, the 2016 revision of the World Health Organization classification of lymphoid neoplasms was discussed. Oral cavity lymphomas represent the third most common malignancy in the oral cavity, surpassed by squamous cell carcinoma and malignancies of the salivary glands.

All the Clinical features, histopathology and IHC markers of these lesions were conversed and also a lecture on the approach to diagnosis of these lesions was also deliberated with slide presentation at the end of the session.

During the course, participants actively participated in the Lecture. This was followed by the Valedictory function. The Organizing committee by Department of Oral Pathology and students who participated were appreciated for all the efforts put to make the event a great success.

Loupes in Dentistry

A CDE programme was organised by the Department of Conservative Dentistry and Endodontics on the 18-02-2021 on the topic "Loupes in Dentistry".

A lecture was given on the same by Dr. Sirekha. A and students were explained about benefits of using loupes in treating different cases and their outcomes which was then followed by demonstration given to the students.

There are three principal reasons for adopting magnifying loupes for operative dentistry: to enhance visualization of fine detail, to compensate for the loss of near vision (presbyopia) and to ensure maintenance of correct posture.

Activity Report – CDE Programme

Ex Machina - A Peek into The Future of Pathology and Healthcare

Objectives :

- ❖ To create awareness among the Participants about Machine learning and Artificial Intelligence and its application in pathology.
- ❖ To create awareness among the Participants about Machine learning and Artificial Intelligence and its application in healthcare.

Date: 23rd June 2021

Time: 10:00 am – 11:30 am

Location: The Oxford Dental College, Bangalore

Organized by: Department of Oral Pathology and Microbiology

Audience: PGs, Interns and Faculty

Speaker: Dr. Shashidara R

Method adopted: Online Platform, Discussion

Materials used: Power point presentation, Brochure, banner, back drop and videos.

Description: The Department of Oral Pathology, Oxford Dental College conducted a CDE Programme on "Ex-Machina -A peek into the future of Pathology and Healthcare" on 21st June 2021. A total of 47 students and Faculty from The Oxford Dental College participated in the Program.

With digitalization disrupting every industry, including healthcare, the ability to capture, share and deliver data is becoming a high priority. Machine learning, big data and artificial intelligence (AI) can help address the challenges that vast amounts of data pose. Artificial intelligence has helped in analyzing data on patient visits to the clinic, medication prescribed, lab tests and procedures performed, for tumor detection and grading to name a few.
