Summary:

Teaching curriculum for dentistry comprises of four years of duration. The pre-clinical training program commences in the second year of dentistry for the undergraduate students. The main purpose of pre-clinical training is to make the students trained to various techniques and practices. The main purpose of pre-clinical training is for the potential benefit of the student. The students start the training process on the plaster models where they understand how to use the basic hand instruments and then on Typhodont. Students are trained right from the beginning to use all the dental instruments so that they get a good hand of it by the time they reach the clinics.

The pre-clinical endodontic lab is very well equipped with phantom heads where the students can get a simulation that they are working on real patients. The entire pre-clinical program is assessed by the teachers who guide and train the students so that they are ready to enter the clinical setup.

The post graduate pre-clinical training program is conducted in the first six months of their MDS course. The students are guided and trained extensively in the department of Orthodontics, pedodontics, prosthodontics, conservative and endodontics. The students are trained on various aspects of using materials, wire bending, casting, root canals etc.

The Department of Oral Pathology utilizes the tooth models for the benefit of the students to learn carving with great precision with the help of tooth models.

Tooth models to learn carving of the tooth anatomical details

The department also has ceramic lab consisting of casting equipments including ceramic unit on which students will be working at pre-clinical and clinical level.

The dental curriculum is designed to educate students to achieve a highest level of clinical competence in order to provide high quality dental treatment.

In prosthodontic training clinical simulation exercises are of great importance for understanding the art and science. Pre-clinical training program should not only focus on hand work simulation expertise but also to do necessary adjustment according to real time clinical situation. Simulator plays an important role in successful completion of treatment strategies. The training program should be presenting with use of instruments, knowledge, scientific rationale, manual dexterity and dental material knowledge.

1. Pre-clinical lab: Demonstration of arrangement of artificial teeth on mean value articulator for undergraduate students and semi-adjustable articulator for PG students mounted in class I, class II and class III situations along with waxing, carving and polishing to be accomplished.

2. Surveying of partial edentulous model and preparing modified edentulous cast.
3. Preparation of wax patterns, spruing, casting and finishing to be demonstrated to student's batch wise.

In phantom head lab: preparation of models of various tooth preparations to receive crown and bridges for fixed partial dentures are demonstrated.

Preparation of wax patterns for minimum of 3 unit fixed partial dentures and investing, casting and porcelain facing for batches of students are demonstrated the porcelain laminates and smile design are also included in clinical simulator exercise.

The Department of Prosthodontics utilizes semi- adjustable and fully adjustable articulators to orient the maxilla to cranium and subsequently the mandible to maxilla. The other departments which make use of these articulators are Department of Orthodontics and Oral Surgery for the orthognathic surgery cases.
