1. DEPARTMENT OF ORAL MEDICINE AND RADIOLOGY

Summary

Oral Medicine is a specialty of dentistry that is concerned with oral health care, diagnosis and dental management of patients with complex medical disorders involving the oral mucosa, Salivary glands, Orofacial Temporomandibular disorders. Oral Medicine specialists are concerned with nonsurgical medical aspects of dentistry. The practice of oral medicine provides optimal health to all people through the diagnosis and management of oral diseases.

Oral and Maxillofacial Radiology is the specialty of dentistry and discipline of radiology concerned with the production and interpretation of images and data produced by all modalities of radiant energy that are used for the diagnosis and management of diseases and conditions of the oral and maxillofacial region.

The Undergraduate and Postgraduate students acquire skill of taking and interpretating various oral and skull radiographs, as well as other advanced

imaging techniques that help them in making a definitive diagnosis. They achieve the necessary training to diagnose and treat patients under the supervision of academically and clinically competent faculty members. The Dept of Oral Medicine and radiology at the Oxford dental college is an academic centre in which education, research and patient care occurs simultaneously –each informing and improving other. The Department is also a recognized centre for post doctoral studies (PhD programme).

Services Provided

- Diagnosis and treatment plan for oral and dental disorders.
- Diagnosis and treatment for orofacial pain, precancerous lesions and mucosal lesions.
- Diagnosis and primary care for oral cancer
- Physiotherapy treatment for tempero mandibular joint disorders and chronic oro facial pain cases.
- Chair side investigations like Biopsy, FNAC, smear for early detection of oral lesions.
- Diagnosis of medical disorders through oral manifestations
- Diagnosis and investigations of trauma of orofacial region
- Laser treatment for mucosal lesions
- Age estimation through radiographs
- Radiological investigations such as IOPA, OPG, extra oral projections and specialized imaging like RVG and digital imaging

2. DEPARTMENT OF ORAL AND MAXILLOFACIAL SURGERY

Summary: -

Oral and maxillofacial surgery is a branch of dentistry which deals with diagnosis and treatment of various diseases, injuries and defects involving the orofacial region. The face is the window of human personality; hence facial deformity has enormous psychological implications. Jaw diseases also affect masticatory ability, thus making the life of these individuals miserable. The oral and maxillofacial surgeons play a big role in restoring the quality of life and bringing these people back into main stream.

The Department of Oral and Maxillofacial Surgery covers 12634 Sq.ft and is divided into three sections. It aims at fulfilling all oral and maxillofacial surgical needs of the patients. The undergraduate wing caters to the basic exodontia requirements of the patients. The postgraduate department deals with complex extractions, minor oral surgeries while the operation theatre complex deals with patients with more complex maxillofacial treatment.

GOALS

The goal of the Oral and Maxillofacial Surgery Program is

- 1. To provide basic and advanced education in Oral and Maxillofacial Surgery
- 2. For an improved understanding of Oral and Maxillofacial diseases and increased skills in their surgical management.

3. To transform the nature of dental education and practice in ways that will dramatically improve the way we serve our students, patients, and the community.

OBJECTIVES

The training program in Oral and Maxillofacial Surgery is to structure and achieve the following objectives

- To train the undergraduates and the post graduate students in the field of oral and maxillofacial surgery with advanced techniques and clinical procedures and inculcate good communication skills with patient so as to ensure higher competence and prepare them for the career in teaching ,research and speciality practice.
- To make available specialised surgical care in the field of Oral and Maxillofacial Surgery for the needy and suffering.

- Content of curriculum, learning methodologies, evaluation process including its components and practical session. Projects, field visits are clearly stated while planning for curriculum implementation.

To make students aware of learning objectives and the entire process followed to achieve competencies in outcome-based education, copy of curriculum and syllabus, time table for both theory and practical, clinical postings, lesson plan with all details of topics as per what student should know, faculty in charge, teaching methodologies, assessment and evaluation methods are given to students well in advance before the starting of academic year.

Dental education focuses on outcomes, competencies and learner centeredness. To help teachers to find out the stage of competency of the learner for further interventions and better learning dental education entails on going assessments. Learning objective are straight forward and measurable while competencies are complex and made up of more than one domain. Each competency is assessed.

Assessments and Evaluation are important parts of the constructive alignment process. To know the level of mastery in the knowledge and skills the student has attained and faculties to know to what level their teaching has helped students to gain knowledge a well-designed assessment is needed.

TODC follows Structured Assessment Methodology of continues comprehensive assessment through formative and summative assessment. Formative Assessment provide students opportunity to correct their errors and improve their knowledge.

Internal Assessment of TODC is based on day to day assessment which includes, student participation in assignments, preparations for seminar, Clinical case

presentation, preparation clinical case for discussion, clinical case problem solving exercise and participation in community based healthcare activities. It also includes proficiency in carrying out practical/skill in small research project and written test. Three Internal Assessment Examinations in each pre-clinical/para clinical subjects and two examinations in each clinical subjects are conducted in a professional year. At the end Clinical Assessment is conducted for each Clinical Posting.

University Examinations are designed to ascertain whether the student has acquired necessary knowledge, minimum skills, ethical and professional values to function effectively as a physician of first contact. Assessment is carried out on an objective day to the extent possible. Questions include long answer, short answer and objective type.

Practical/Clinical Examinations are conducted in the laboratories or hospital wards or clinics of each specialty to assess proficiency and skills to conduct experiments, interpret data and formed logical conclusion. Clinical cases kept for examination are all of common conditions. There is only one main examination in an academic year and supplementary exam will be held within 90 days after the declaration of results of the main examination.

educated to provide ethical, patient-centred, evidence-based Orthodontic treatment. In addition, our aim is to graduate students as pioneers who possess advanced technical skills with a comprehensive scientific foundation, thirst for knowledge, and the capacity to become better clinicians in the field of orthodontics education and research. The three year post graduate programme not only focuses on sound theoretical basis, but also a development of critical analysis of problems and a spirited approach towards solving the same.

The program places equal emphasis on clinical ability, research skills, and leadership capabilities. We do this through our commitment to the transformative power of providing best education available. This begins in our classrooms with exposure to new ideas, new ways of learning and with the help of technology we create a diverse learning environment, where students are encouraged towards intellectual transformation. We also aim to maintain highest standards of excellence and professionalism in all aspects of patient centered practice with research being an integral part of our department.

We religiously follow the curriculum provided by Rajiv Gandhi University of Health Sciencs (RGUHS), with the best interest of our BDS students we conduct weekly tests, group discussions, textbook reading, assignments, have one to one interaction to clear their doubts and each student is assigned a mentor to help them academically. Whereas our Post Graduate students are encouraged to take part in scientific research and competitive sectors to expand their knowledge, with

dissertation we also do short studies and publications pertaining to the new age Orthodontics.

Services provided in our department:

The post graduate course in orthodontics and dento facial orthopedics aims to provide the students with an all-round knowledge and holistic approach towards the various clinical scenarios. A key step in this goal is familiarization with multiple appliances, both conventional and contemporary in nature. The students in the department are encouraged to use different appliance systems in keeping with the same.

The students are encouraged to choose an appliance system based on the merits of the system and the requirements of the case. The clinical knowledge to choose the best fit system is important in orthodontic patient management. The following fixed mechanotherapy appliance systems are used by the postgraduates in the department:

- 1. MBT+ Preadjusted edgewise appliance (METAL and CERAMIC)
- 2. Begg's light wire technique
- 3. Passive self-ligating system (DAMON PHILIOSPHY)
- 4. Clear aligner technique (INVISALIGN)

The care of adolescent patients includes growth modulation therapy. The Dentofacial orthopedics appliances taught to the students include a variety of older and newer methods. Removable and fixed appliances are practiced regularly in the

Students are taught by academicians and practitioners with years of rich experience in the field. The programs offered by the Department adopt a comprehensive approach to dental education and cover a wide range of topics from patient education and investigations to preventive services and treatments.

The Department of Paediatric and Preventive Dentistry focuses on inculcating this patient-first approach in its students. Treating children or individuals with special health care needs, requires meticulous planning right from the environment to the treatment plan. In our department, we uphold the moral and ethical values before treatment planning keeping the care and comfort of the patient in mind.

Students also participate in the community engagement activities of the Department, which include screening camps for students of government schools and providing free treatment to school children and underprivileged children as a part of School oral health programme.

Department has formulated learning outcomes and objectives for UG & PG programs through systematic program process. Copy of curriculum and syllabus, exam time table, clinical postings, lesson plan assessment and evaluation methods are given to students before the starting of academic year. Department follows a Structured Assessment Methodology of continues comprehensive assessment through formative and summative assessment. principles of biological functions and be able to evaluate and analyse

scientifically various established facts and data.

2. Adequate knowledge of the development, structure and function of the teeth, mouth and jaws and associated tissues both in health and disease and their relationship and effect on general state of health and also bearing on

physical and social well being of the patient.

3. Adequate knowledge of clinical disciplines and methods which provide a coherent picture of anomalies, lesions and diseases of the teeth, mouth and

jaws and preventive diagnostic and therapeutic aspects of dentistry.

4. Adequate clinical experience required for general dental practice.

5. Adequate knowledge of the constitution, biological function and

behaviour of persons in health and sickness as well as the influence of the

natural and social environment on the state of health in so far as it affects

dentistry.

(B) SKILLS: A graduate should be able to demonstrate the following skills

necessary for practice of dentistry.

1. Able to diagnose and manage various common dental problems

encountered in general dental practice keeping in mind the expectations and

the right of the society to receive the best possible treatment available

wherever possible.

2. Acquire the skill to prevent and manage complications if encountered

while carrying out various surgical and other procedures.

Summary: -

The Education program in the Department of Periodontology at The Oxford Dental College and Research Centre aims at providing a comprehensive dental education to the students. The students are trained to be skilful and be an efficient clinician. In addition, our aim is to motivate and encourage students to take up research work and involved conducting micro classes to their own batchmates so as to train them to be good academicians as well. The undergraduate students are trained for overall comprehensive care of dental care. The three year post graduate programme focuses on complete training of the students to polish their clinical skills and train them to be ethical clinician practician, academician and researcher

The program places equal emphasis on clinical ability, research skills, and leadership capabilities. We do this through our commitment to the transformative power of providing best education available. This begins in our classrooms with exposure to new ideas, new ways of learning and with the help of technology we create a diverse learning environment, where students are encouraged towards intellectual transformation. We also aim to maintain highest standards of excellence and professionalism in all aspects of patient centered practice with research being an integral part of our department.

We religiously follow the curriculum provided by Rajiv Gandhi University of Health Sciencs (RGUHS), with the best interest of our BDS students we conduct weekly tests, group discussions, textbook reading, assignments, have one to one

Summary: -

The Education program in the Department of conservative dentistry and endodontics and at The Oxford Dental College and Research Centre focuses on providing the students with holistic knowledge and necessary skills required for everyday practice. The students are educated to provide ethical, patient-centred, evidence-based Restorative and Endodontic treatment. In addition, our aim is to graduate students as pioneers who possess advanced technical skills with a comprehensive scientific foundation, thirst for knowledge, and the capacity to become better clinicians in the field of Conservative Dentistry and Endodontics education and research. The three year post graduate programme not only focuses on sound theoretical basis, but also a development of critical analysis of problems and a spirited approach towards solving the same.

The program places equal emphasis on clinical ability, research skills, and leadership capabilities. We do this through our commitment to the transformative power of providing best education available. This begins in our classrooms with exposure to new ideas, new ways of learning and with the help of technology we create a diverse learning environment, where students are encouraged towards intellectual transformation. We also aim to maintain highest standards of excellence and professionalism in all aspects of patient centered practice with research being an integral part of our department.
