## Tooth models to learn carving of the tooth anatomical details

The department also has ceramic lab consisting of casting equipments including ceramic unit on which students will be working at pre-clinical and clinical level.

The dental curriculum is designed to educate students to achieve a highest level of clinical competence in order to provide high quality dental treatment.

In prosthodontic training clinical simulation exercises are of great importance for understanding the art and science. Pre-clinical training program should not only focus on hand work simulation expertise but also to do necessary adjustment according to real time clinical situation. Simulator plays an important role in successful completion of treatment strategies. The training program should be presenting with use of instruments, knowledge, scientific rationale, manual dexterity and dental material knowledge.

1. Pre-clinical lab: Demonstration of arrangement of artificial teeth on mean value articulator for undergraduate students and semi-adjustable articulator for PG students mounted in class I, class II and class III situations along with waxing, carving and polishing to be accomplished.

2. Surveying of partial edentulous model and preparing modified edentulous cast.

3. Preparation of wax patterns, spruing, casting and finishing to be demonstrated to student's batch wise.
